

Hello! I graduated from the University of Connecticut, majoring in Civil Engineering and minoring in Landscape Architecture. I have been involved in numerous projects pertaining to both disciplines after entering the field. I've worked on defense contractor sites, schools, parks, bike paths, intersections, subdivisions, parking garages, full-time care facilities, forensic laboratories, and more. My experience includes aspects of site development, including grading and drainage, site layout, hydrological/hydraulic analyses, and environmental permitting. I have experience with feasibility studies, master planning, planting plans, and graphics. My dual background motivates me to build sustainable and equitable communities by implementing resilient social, economic, and environmental site development strategies. I recently obtained my Professional Engineer license in the State of Connecticut this past year.
