

Jackie Videira graduated from UConn in 2019 with a BSE in Computer Science and Engineering. After graduating she started working at Lockheed Martin as a software engineer and was focused on writing software to create training programs for the US Department of Defense. After spending a year at Lockheed Martin, she left the position and is currently working as systems engineer for Dexai Robotics, a robotics startup in Boston, MA that creates kitchen robots. While she started off here focusing on UI development, she now works on software that interacts with and controls different parts of the robot system. While she was at UConn, she was heavily involved in SWE. In her free time, she can be found hiking if the weather is nice, and inside crocheting and baking if it is not.
