

Hi! My name is Jessica Maita. I am a first-generation, Hispanic, female engineer currently working towards a doctorate in Materials Science and Engineering (MSE). I received my bachelor's from Rochester Institute of Technology in Chemical Engineering. My work experience from undergrad was in materials so when I decided to pursue a graduate degree I chose to switch to MSE. I like to stay involved in different organizations on campus. I am part of the Materials Research Society, Student Association of Graduate Engineers, and this year founded the Graduate Society of Hispanic Professional Engineers here at UConn.

Ph.D. Candidate in Materials Science and Engineering

Graduate Society of Hispanic Professional Engineers President
